

Center for Vaccine
Ethics and Policy

Vaccines and Global Health: The Week in Review
09 September 2023 :: Issue 717
Center for Vaccine Ethics & Policy (CVEP)

This weekly digest targets news, events, announcements, articles and research in the vaccine and global health ethics and policy space and is aggregated from key governmental, NGO, international organization and industry sources, key peer-reviewed journals, and other media channels. This summary proceeds from the broad base of themes and issues monitored by the Center for Vaccine Ethics & Policy in its work: it is not intended to be exhaustive in its coverage.

Vaccines and Global Health: The Week in Review is published as a PDF and scheduled for release each Saturday [U.S.] at midnight [0000 GMT-5]. The PDF is posted at <https://centerforvaccineethicsandpolicy.net>. This blog allows full text searching of over 27,000 entries.

Comments and suggestions should be directed to

Milestones, Perspectives

G20 New Delhi Leaders' Declaration

New Delhi, India, 9-10 September 2023

[Except; Editor's text bolding]

Strengthening Global Health and Implementing One Health Approach

28. We remain committed to strengthening the global health architecture, with the World Health Organization (WHO) at its core, and building more resilient, equitable, sustainable, and inclusive health systems to achieve Universal Health Coverage, implement One Health approach, enhance pandemic preparedness and strengthen existing infectious diseases surveillance systems.

To achieve this, we will:

- i. Focus on **strengthening primary health care and health workforce and improving essential health services and health systems to better than pre-pandemic levels, ideally within the next 2-3 years**, as well as continue progress towards polio eradication and ending ongoing epidemics including AIDS, tuberculosis, malaria, hepatitis and water-borne and other communicable diseases, also recognising the importance of research on long COVID.
- ii. Promote the One Health-based approach driven by the **Quadripartite's One Health Joint Plan of Action (2022-2026)**.
- iii. Enhance the resilience of health systems and support development of climate-resilient and low-carbon health systems in collaboration with MDBs, and support the work of the WHO-led Alliance for Transformative Action on Climate and Health (ATACH).
- iv. **Implement and prioritise tackling Antimicrobial Resistance (AMR)** following the One Health approach, including through research and development, infection prevention and control, as well as antimicrobial stewardship efforts within respective national action plans through AMR and antimicrobial consumption surveillance.
- v. **Facilitate equitable access to safe, effective, quality-assured, and affordable vaccines, therapeutics, diagnostics, and other medical countermeasures, especially in Low-and Middle-income Countries (LMICs), LDCs and SIDS.**
- vi. Look forward to a successful outcome of the ongoing negotiations at the Intergovernmental Negotiating Body (INB) for an ambitious, legally binding WHO convention, agreement or other **international instruments on pandemic PPR (WHO CA+) by May 2024, as well as amendments to better implement the International Health Regulations (2005)**.
- vii. Recognize the potential role of evidence-based Traditional and Complementary Medicine in health, and take note of international efforts in this direction, including WHO's global and collaborating centres, and clinical trial registries.
- viii. Support the WHO-led inclusive consultative process for the development of an interim medical countermeasures coordination mechanism, with effective participation of LMICs and other developing countries, considering a network of networks approach, leveraging local and regional

R&D and manufacturing capacities, and strengthening last mile delivery. This may be adapted in alignment with the WHO CA+...

Global HPV Consortium

[Sabin Vaccine Institute Leads Public and Private Sector Fight to Prevent HPV and End Cervical Cancer with Global HPV Consortium Launch in Kuala Lumpur](#)

September 4, 2023

The Global HPV Consortium, a worldwide public and private collaboration focused on accelerating prevention of Human Papillomavirus (HPV) and eliminating cervical cancer, launched today in Kuala Lumpur, Malaysia. **The Sabin Vaccine Institute will lead the Consortium as its Secretariat.**

“We are building a new ecosystem in global public health,” said Anuradha Gupta, President of Global Immunization at Sabin. “We aim to create and implement a strategic roadmap focused on improving access and adoption of the tools in our HPV prevention arsenal – vaccines, screening, and treatment of precancerous lesions.”

Cervical cancer affects more than 600,000 women each year. It kills approximately 350,000 women annually, is increasing in frequency, and is highly preventable with the HPV vaccine. Almost 90% of the deaths from cervical cancer occur in low- and middle-income countries, where resources including secondary prevention such as screening and treatment, are limited. **Without action, cervical cancer is projected to increase almost 50% by 2040...**

The Consortium brings together a **transdisciplinary alliance of public and private stakeholders, including organizations working on vaccination, cancer-control, non-communicable diseases, HIV, reproductive and adolescent health, gender equity and women empowerment.** Joining the launch are country leaders, policy makers, implementers, researchers, youth advocates, women champions, non-profits, and industry representatives including manufacturers of vaccines, syringes, cold-chain, diagnostics, and therapeutics.

These goals support the groundbreaking 2018 World Health Organization Initiative to end cervical cancer –the first cancer targeted for elimination – and the World Health Organization’s 90-70-90 strategy of 90 percent of women vaccinated, 70 percent screened, and 90 percent treated by 2030...

Although the HPV vaccine has been available for 17 years, fewer than 1 in 7 eligible girls have received the vaccine and the global number vaccinated for HPV fell during the pandemic.

For more information about the Consortium, visit: www.globalhpvconsortium.org

Polio – PHEIC

[Polio this week as of 06 Sep 2023 - GPEI](#)

Headlines

:: "It is important for us that our country and global partners and donors stand together in this final leg of the eradication journey. I am a polio worker at heart. I will ensure that not only does polio remain a priority at all tiers of governance, but efforts are more targeted and intensified." – Dr Nadeem Jan, newly-appointed interim Federal Health Minister, Pakistan. [Read more...](#)

:: Burundi fights back against polio as it launches round two of a nearly three-million child polio vaccination campaign, amid concerns the paralyzing virus could still be spreading silently. [Read more...](#)

Summary of new polioviruses this week, cases and positive environmental isolates:

- Pakistan: one WPV1 positive environmental sample
- Algeria: one cVDPV2 positive environmental sample
- Botswana: one cVDPV2 positive environmental sample
- Cameroon: one cVDPV2 positive environmental sample
- Côte d'Ivoire: two cVDPV2 positive environmental samples
- DR Congo: one cVDPV2 case and three cVDPV2 positive environmental samples
- Kenya: two cVDPV2 cases
- Mali: three cVDPV2 cases
- Somalia: one cVDPV2 positive environmental sample
- Tanzania: one cVDPV2 case and one cVDPV2 positive environmental sample

[Ending the COVID-19 emergency and transitioning from emergency phase to longer-term disease management: guidance on calibrating the response, 4 September 2023](#)

WHO 4 September 2023

Overview

This document complements the newly released [Strategic Preparedness and Response Plan \(SPRP\)](#). It outlines the essential actions, activities, and approaches of the different pillars of the COVID-19 SPRP operational planning guidelines, which are structured according to the 5C's framework, which represents the Core components of WHO's efforts in enhancing the global architecture for health emergency preparedness, response, and resilience.

Table 1. Alignment of the 2020–2022 SPRP pillars of the COVID-19 response with the 5 core components of the global health architecture

Core components of WHO's Strengthening global architecture for health emergency preparedness, response, and resilience	Pillars of the COVID-19 SPRP operational planning guidelines
Coordination	<input type="checkbox"/> Pillar 1: Coordination, planning, financing, and monitoring
Collaborative surveillance	<input type="checkbox"/> Pillar 3: Surveillance, epidemiological investigation, contact tracing, and adjustment of public health and social measures
	<input type="checkbox"/> Pillar 5: Laboratories and diagnostics
Community protection	<input type="checkbox"/> Pillar 2: Risk communication, community engagement (RCCE), and infodemic management
	<input type="checkbox"/> Pillar 4: Points of entry, international travel and transport, mass gatherings and population movement
	<input type="checkbox"/> Pillar 10: Vaccines research, policy, and strategy
Safe and scalable care	<input type="checkbox"/> Pillar 6: Infection prevention and control, and protection of the health workforce
	<input type="checkbox"/> Pillar 7: Case management, clinical operations, and therapeutics
	<input type="checkbox"/> Pillar 9: Strengthening essential health services and systems
Countermeasures and research	<input type="checkbox"/> Pillar 8: Operational support and logistics, and supply chains
	<input type="checkbox"/> Pillar 10: Vaccines research, policy, and strategy

September 4, 2023, SEOUL, Republic of Korea – The International Vaccine Institute (IVI), EuBiologics, and DEK Vaccines Limited (DEK) signed a memorandum of understanding (MOU) today at Ghana’s National Vaccine Institute establishing a new partnership to support the fill and finish of the EuBiologics oral cholera vaccine (OCV) in DEK’s manufacturing facilities in Ghana...

Through this new tripartite partnership, IVI and EuBiologics plan to transfer OCV fill and finish technology to DEK, enabling domestic production, purchase, and sales of OCV. Additionally, the MOU outlines further collaborative activities including support for OCV clinical trials in Ghana and other African countries, sufficiently scaling up vaccine production capacity, and gaining regulatory approvals.

[UNICEF Latin America and the Caribbean Regional Director Garry Conille's remarks on the Child Alert on child migration in the region at a Press Briefing by the Office of the Spokesperson for the Secretary-General](https://www.unicef.org/press-releases/unicef-latin-america-and-caribbean-regional-director-garry-conille-remarks-on-the-child-alert-on-child-migration-in-the-region-at-a-press-briefing-by-the-office-of-the-spokesperson-for-the-secretary-general)

<https://www.unicef.org/press-releases/unicef-latin-america-and-caribbean-regional-director-garry-conilles-remarks-child>

"Good morning. "Today, I have the distinct privilege of unveiling the latest UNICEF Child Alert report, focusing on the evolving migration patterns of children and families in Latin America and the Caribbean. "The purpose of our gathering is twofold: to highlight these critical findings and to underscore the urgency of the situation we are facing...

[New partnership working on solutions to combat African animal trypanosomiasis](#)

Ingelheim, Germany, Tuesday, 05/09/2023 - 13:00

- African animal trypanosomiasis (AAT), also known as nagana, is a substantial socio-economic burden to livestock farmers in Sub-Saharan Africa, affecting and killing millions of cattle every year.
- The Bill and Melinda Gates Foundation, the UK Government Foreign Commonwealth and Development Office, Boehringer Ingelheim and GALVmed have joined forces to find a new medical solution to African animal trypanosomiasis (AAT).

Journal Watch

Vaccines and Global Health: The Week in Review continues its weekly scanning of key peer-reviewed journals to identify and cite articles, commentary and editorials, books reviews and other content supporting our focus on vaccine ethics and policy. Journal Watch is not intended to be exhaustive, but indicative of themes and issues the Center is actively tracking. We selectively provide full text of some editorial and comment articles that are specifically relevant to our work. Successful access to some of the links provided may require subscription or other access arrangement unique to the publisher.

If you would like to suggest other journal titles to include in this service, please contact David Curry at: david.r.curry@centerforvaccineethicsandpolicy.org

Palliative Psychiatry

All general medical, surgical, and psychiatric patients deserve palliative approaches to their care. Palliative psychiatry, especially, deserves clinical and ethical attention because of its promise as an emerging field renewing attention to patients whose illnesses—such as treatment resistant depression—and symptoms—such as persistent suicidality—challenge our faith in health care as a life-affirming source of hope. Responding with care to vulnerabilities and needs of these patients requires prioritizing symptom management, relieving suffering, focusing on quality of life, reducing harms of aggressive interventions, and minimizing use of physical or chemical force. This theme issue investigates how inquiry into palliative psychiatry can reinvigorate core philosophy of medicine investigations into what health care is for.

Feature

Multilateralism and the Global Co-Responsibility of Care in Times of a Pandemic: The Legal Duty to Cooperate

Thana C. de Campos-Rudinsky

Published online by Cambridge University Press: 29 August 2023, pp. 206-231

Abstract

This article challenges the orthodox view of international law, according to which states have no legal duty to cooperate. It argues for this legal duty in the context of COVID-19, based on the ethical principles of solidarity, stewardship, and subsidiarity. More specifically, the article argues that states have a legal duty to cooperate during a pandemic (as solidarity requires); and while this duty entails an extraterritorial responsibility to care for and assist other nations (as stewardship requires), the legal duty to cooperate still allows states to attend first to the basic needs of those under their own jurisdiction—namely, fellow nationals and residents (as subsidiarity requires). The article provides a definition and philosophical justifications for this legal duty that are lacking in the literature by examining its application to a current COVID-19 controversy: namely, states' responsibility to assist other countries in greater need by, *inter alia*, exporting at a discount or donating scarce COVID-19 treatments (including vaccines). In providing a principled tripartite account of pandemic governance, this conceptual and normative article offers a new lens for debating the potential international treaty for pandemic prevention, preparedness, and response that has now been drafted and is under negotiation at the World Health Assembly, by responding to the recent backlash against multilateralism by substantiating global co-responsibilities in times of pandemics and beyond.

Health and Human Rights

Volume 25, Issue 1, June 2023,

<https://www.hhrjournal.org/special-section-global-voices-for-global-equity-expanding-right-to-health-frameworks/>

Special Section: Global Voices for Global Justice: Expanding Right to Health Frameworks

...The papers in this special section work together to move toward a global social medicine for the 22nd century. They envision a global social medicine that confronts and moves beyond the traditionally colonial, xenophobic, heteronormative, patriarchal, gender-binary-bound, capitalist, and racist histories of the fields of global health and human rights. They seek to instantiate a global social medicine that centers knowledge and experiences from the Global South and works toward social justice and health equity at scale. In this special section, the authors are particularly interested in understanding, challenging, and expanding our perspectives and enactments of the right to health. Unlike neoliberal perspectives on health that often limit their explanatory capacity to how individuals behave in the world, the papers here move beyond the focus on lifestyles and on the phantasmagoria of a sovereign subject with supposedly free agency. Instead, authors work toward critical consciousness that accounts for structural processes—with their inequities and disruptions, as well as their effects on individuals—and how this consciousness can open new horizons for collective transformation and social emancipation in health...

Integrated knowledge translation (IKT) through strategic, continuous engagement with decision-makers represents an approach to bridge research, policy and practice. The Collaboration for Evidence-based Healthcare and Public Health in Africa (CEBHA +), comprising research institutions in Ethiopia, Malawi, Rwanda, South Africa, Uganda and Germany, developed and implemented tailored IKT strategies as part of its multifaceted research on prevention and care of non-communicable diseases and road traffic injuries. The objective of this article is to describe the CEBHA + IKT approach and report on the development, implementation and monitoring of site-specific IKT strategies.

JAMA. 2023;330(9):866-869. doi:10.1001/jama.2023.14217

Abstract

Importance There is increased interest in and potential benefits from using large language models (LLMs) in medicine. However, by simply wondering how the LLMs and the applications powered by

them will reshape medicine instead of getting actively involved, the agency in shaping how these tools can be used in medicine is lost.

Observations Applications powered by LLMs are increasingly used to perform medical tasks without the underlying language model being trained on medical records and without verifying their purported benefit in performing those tasks.

Conclusions and Relevance The creation and use of LLMs in medicine need to be actively shaped by provisioning relevant training data, specifying the desired benefits, and evaluating the benefits via testing in real-world deployments.

Original research

[Herd immunity, vaccination and moral obligation](#) (5 June, 2023)

Matthew Bullen, George S Heriot, Euzebiusz Jamrozik

Abstract

The public health benefits of herd immunity are often used as the justification for coercive vaccine policies. Yet, 'herd immunity' as a term has multiple referents, which can result in ambiguity, including regarding its role in ethical arguments. The term 'herd immunity' can refer to (1) the herd immunity threshold, at which models predict the decline of an epidemic; (2) the percentage of a population with immunity, whether it exceeds a given threshold or not; and/or (3) the indirect benefit afforded by collective immunity to those who are less immune. Moreover, the accumulation of immune individuals in a population can lead to two different outcomes: elimination (for measles, smallpox, etc) or endemic equilibrium (for COVID-19, influenza, etc). We argue that the strength of

a moral obligation for individuals to contribute to herd immunity through vaccination, and by extension the acceptability of coercion, will depend on how 'herd immunity' is interpreted as well as facts about a given disease or vaccine. Among other things, not all uses of 'herd immunity' are equally valid for all pathogens. The optimal conditions for herd immunity threshold effects, as illustrated by measles, notably do not apply to the many pathogens for which reinfections are ubiquitous (due to waning immunity and/or antigenic variation). For such pathogens, including SARS-CoV-2, mass vaccination can only be expected to delay rather than prevent new infections, in which case the obligation to contribute to herd immunity is much weaker, and coercive policies less justifiable.

<https://doi.org/10.1093/jtm/taad110>

Human monkeypox was first reported in Africa in 1970. However, the disease has only entered notoriety since the current public health emergency of international concern in Europe and the Americas in 2022. At present there is significant inequality in access to diagnostics, vaccinations and therapeutics, due to which African nations are being completely left behind.

Tiffany Fitzpatrick, et al. on behalf of the Special Immunization Clinic Network investigators

People with inflammatory or autoimmune diseases are recommended to continue immunomodulatory biologic agents throughout pregnancy. However, concerns regarding potential immunosuppression in infants exposed to biologic agents have led to recommendations to avoid live vaccines in the first 6–12 months of life. We aimed to examine whether live rotavirus vaccine could be administered safely to infants exposed to biologic agents, assessed in the Canadian Special Immunization Clinic (SIC) Network

[Challenges in accelerated approvals for gene therapies](#)

Rafael Escandon, John Lantos

The path to effective therapies across the landscape of the approximately 7,000 rare genetic diseases has been both tortuous and transformative. The Duchenne muscular dystrophy (DMD) experience represents the former and may be emblematic of the challenges faced when developing

therapies for those genetic diseases with high unmet need but variable presentations that ultimately progress to disabling and fatal outcomes. To date, the FDA has approved four treatments in DMD, all through the mechanism of “accelerated approval” (AA).

[REVISED - A study on biomedical researchers' perspectives on public engagement in Southeast Asia](#) [version 2; peer review: 2 approved with reservations]

Han Tran Dong Thai, et al.

Abstract

Introduction:

Public engagement is increasingly promoted in the scientific community. Although there are studies about researchers' perspectives on public engagement, these are predominantly from Global North settings and there is little data from the context of Southeast Asia. The Oxford University Clinical Research Unit (OUCRU) is a clinical and public health research programme with sites in Vietnam, Nepal and Indonesia. There is a dedicated public engagement team, and it is recognised as an important part of the research process.

Methods:

Through this study we explored the views and needs of local researchers with regards to practicing public engagement. We obtained opinions of 70 researchers through an online survey with both open-ended and closed-ended questions.

Results:

Most researchers perceived public engagement as improving public science literacy, rather than supporting public participation in science and research. While the participants largely see public engagement as a necessary practice, they experienced four main barriers to taking part in public engagement: time, lack of capacity, lack of support and personal perceptions. Most participants indicated they had somewhat to low confidence to communicate about science to the public. Experience, skill and knowledge, and personal preference emerged as factors that influence their perceived confidence for science communication. In our analysis, experience appeared to be the main factor contributing to researchers' high confidence.

Recommendations:

We recommended to support researchers by not only providing them with training for skills and knowledge, but also with opportunities to conduct public engagement, and a range of methods to suit their personal styles of communicating. It is also evident that more support is needed to build an enabling institutional environment that gives researchers professional recognition for their engagement work. This study, while modest in its scope, has informed our approach to supporting researcher-led engagement, and may guide other institutes wishing to improve this.

[Research Publishing Is an Under-Recognised Global Challenge: Opportunities for the G20 to Act](#)

Tom Drake et al.

September 05, 2023

The G20 is well placed to provide the leadership needed to ensure that research is a global public good by elevating the discourse on research publishing reform and acknowledging that this is not merely a niche concern for researchers but an important global challenge that underpins human progress.

.....

CVEP is a program of the [GE2P2 Global Foundation](#) whose purpose and mission is to advance ethical and scientific rigor in research and evidence generation for governance, policy and practice in health, human rights action, humanitarian response, heritage stewardship, education and

sustainable development. The Foundation serves governments, international agencies, INGOs, civil society organizations (CSOs), commercial entities, consortia and alliances.

Support for this service is provided by the Bill & Melinda Gates Foundation; the Bill & Melinda Gates Medical Research Institute, PATH, and industry resource members Janssen/J&J, Pfizer, Sanofi US, and Takeda, (list in formation).

Support is also provided by a growing list of individuals who use this membership service to support their roles in public health, clinical practice, government, NGOs and other international institutions, academia and research organizations, and industry.
