Ethics and Policy

Vaccines and Global Health: The Week in Review
15 June 2024 :: Issue 755
Center for Vaccine Ethics & Policy (CVEP)

This weekly digest targets news, events, announcements, articles and research in the vaccine and global health ethics and policy space and is aggregated from key governmental, NGO, international organization and industry sources, key peer-reviewed journals, and other media channels. This summary proceeds from the broad base of themes and issues monitored by the Center for Vaccine Ethics & Policy in its work: it is not intended to be exhaustive in its coverage.

Vaccines and Global Health: The Week in Review is published as a PDF and scheduled for release each Saturday [U.S.] at midnight [0000 GMT-5]. The PDF is posted at <https://centerforvaccineethicsandpolicy.net>. This blog allows full text searching of over 27,000 entries.

Milestones, Perspectives

[2023 WHO Global Vaccine Market Report](#)

9 June 2024

Overview

The 2023 report provides an update on key facts and figures and reinforces the call-to-action that appeared in the 2022 Global Vaccine Market Report in the light of ongoing landmark regional and global initiatives, including the Pandemic Accord discussions and the African Union's call for a New Public Health Order for Africa.

Key takeaways

This year's main observations are:

Looking at the size of the market, and despite the decline of COVID-19 vaccine purchases in 2022, COVID-19 vaccines continue to amount to a considerable fraction (60%) of the global vaccine market volume. Total volumes in the market, excluding COVID-19 vaccines were approximately five billion doses (consistent with 2021 and pre-pandemic years); other high volume, non-COVID vaccines were seasonal Influenza, oral polio and tetanus diphtheria-containing vaccines. In 2022 we see a significant increase in volumes of measles-rubella (MR) vaccines as a result of the catch-up efforts.

Excluding the COVID-19 portion of the market, global vaccine value has continued to grow over the past four years, driven partly by increasing use of high-priced adult vaccines (pneumococcal conjugate vaccine and shingles), as well as significant value growth in China driven primarily by private market demand for human papillomavirus vaccine.

Concentration of vaccine manufacturing remains, with 10 manufacturers alone providing 75% of vaccine doses (excluding COVID-19 vaccines) and capturing 85% of the global value of vaccines, with more than 80 manufacturers serving the remaining market.

The supply of vaccines for countries in the WHO African and the Eastern Mediterranean regions continues to come from outside the respective regions. Important investments in local production capacity by the regional and international community are ongoing to align with regional goals.

In terms of geographical volume share of demand, the WHO South-East Asia Region continued to consume some 30% of vaccines globally. The WHO African Region consumed an increasing share (12%) of total volumes in 2022 compared to 2021 (8%). In the years before COVID-19, the region used to account for approximately 20% of global volumes – a fact suggesting that the 2021 and 2022 low numbers can be attributed to the region's lower consumption of COVID-19 vaccines compared to the rest of the world.

From a value perspective, the WHO Region of the Americas expends the most, driven by high prices and volumes in the United States of America, followed by the WHO Western Pacific Region where demand is driven by China's large volumes.

When segmenting the market by income group, vaccines purchased by middle-income countries account for 60% of the global volumes and 34% of the value. High-income countries represent 29% of the global volume and 63% of value, driven by vaccines that are higher-priced than those procured by other groups.

In terms of the procurement mechanism, self-procured vaccines, almost exclusively by middle income and high-income countries, represent approximately 75% of the market in volume and 90% of the market in value. Pooled procurement mechanisms, by UNICEF, the PAHO Revolving Fund, and others represent the remaining 25% and 10%, respectively.

Globally, prices are tiered by income group, but we continue to identify the opportunity to reduce the spread of vaccine pricing within income groups and improve affordability. This holds particularly for upper middle-income countries which often pay prices comparable to or higher than those of high-income countries (HICs).

...WHO continues to call on governments to commit to:

1. **establish early, evidence-informed strategic goals and leadership** that serve the collective global health interest, and **shoulder risks and invest aggressively** in order to address today's needs and prepare for future emergencies;
2. **strengthen market preparedness** by investing in new vaccine technologies, regional research and development and manufacturing hubs, and by enabling regulatory harmonization; and
3. **ensure transparency and oversight** along the vaccine value chain towards enhanced health impact, as well as define principles and operational mechanisms for collaboration across countries in times of scarcity, including particularly for intellectual property and the circulation of inputs and goods.

We call on the industry to commit to:

1. **ensure that activities are aligned with WHO's guidance** (namely research and development efforts focused on the WHO list of priority pathogens and target product profiles, more clinical trials performed in low-income countries, and targeted to inform global policy needs and expedited data submissions for regulatory approvals and prequalification);
2. **establish provisions for technology transfer** and ensure transparency along the vaccine value chain; and
3. **implement specific measures that allow for equity-driven allocation** of products.

Finally, we call on international organizations and partners to commit to:

1. **prioritize the achievement of global public health priorities** in line with the Immunization Agenda 2030 as an umbrella for individual organizational strategies, priorities and interests;
2. **support country-driven initiatives and projects consistently** with organizations' missions and avoid the creation of duplicate efforts;
3. **continue to call for technology transfer and for the application of resolutions on market transparency** for health products.

Gavi

[Gavi to boost access to life-saving human rabies vaccines in over 50 countries](#)

Joint Announcement by Gavi, WHO and United Against

13 June 2024 – Gavi, the Vaccine Alliance, in collaboration with partners, has announced **support for human rabies vaccines for post exposure prophylaxis (PEP) as part of routine immunisation. Eligible countries are receiving guidance on how to access these vaccines under Gavi’s cofinancing policy.** The first round of applications will be accepted by mid- July 2024. Ninety-five percent of human rabies deaths occur in Africa and Asia, most often in marginalised communities that lack access to care.

This development complements ongoing global efforts of the [Zero by 30 campaign](#), led by United Against Rabies Forum including the Food and Agriculture Organization (FAO), the World Health Organisation (WHO), and the World Organisation for Animal Health (WOAH, formerly (OIE), with the goal of eliminating all dog-mediated human rabies deaths by 2030...

In more than 150 countries where dog rabies remains a serious public health problem, stocks of human rabies vaccines in public health systems are often extremely limited, especially in marginalised communities. Where human rabies vaccine is available through private facilities, the cost of PEP can impose a catastrophic financial burden on families and communities.

“Gavi’s aim with this program is to contribute to the global rabies control effort and save lives by ensuring that human rabies vaccines are available to those that need them the most, including the vulnerable and marginalised communities that too often get left behind,” said Aurélia Nguyen, the Chief Programme Officer at Gavi, the Vaccine Alliance...

All Gavi-eligible countries can apply for support to invest in human rabies vaccines for PEP. Funding will be available for vaccine procurement and associated supplies. Rabies immunoglobulins (RIG) and dog vaccines are not covered by this program. Countries are not required to have a national rabies control plan in place to apply for the first round of multiyear funding, but a national plan will be mandatory for all subsequent requests.

Funding applications will be accepted by Gavi in 2024 by 15 July and by 23 September 2024, with subsequent funding windows open three times every year.

[Gavi announces launch of preventive Ebola, routine multivalent meningitis, human rabies, and hepatitis B birth dose vaccination programmes](#)

- **In historic step, preventive Ebola vaccination to become norm in highest-risk countries**
- Gavi will also support lower-income countries for routine administration of human rabies vaccine for post-exposure prophylaxis, as well as multivalent meningococcal conjugate and hepatitis B birth dose vaccines
- Dr Sania Nishtar, CEO of Gavi: “Gavi’s ability as an Alliance to protect health and save lives hinges on its ability to ensure vaccines are accessible, as quickly as possible, to who that need them the most. The new programmes launching today demonstrate the impact of this work. For example, Ebola is a terrible disease that can lay waste to whole communities. In one decade we have been able to progress from having no approved vaccines during a deadly outbreak, to having a global

stockpile that has helped cut down cases and deaths – and now vaccines even used preventively to protect those at highest risk.”

Geneva, 13 June 2024 – Gavi, the Vaccine Alliance today announced that **the lower-income countries it supports can now apply to introduce four additional vaccines: preventive Ebola, human rabies vaccine for post-exposure prophylaxis, multivalent meningococcal conjugate and hepatitis B birth dose.**

These four vaccine programmes were previously approved by the Gavi Board but put on hold either due to the COVID-19 pandemic (in the case of human rabies for post-exposure prophylaxis and hepatitis B birth dose); pending availability of suitable products (multivalent meningococcal conjugate); or appropriate policy recommendations (preventive Ebola).

The latest expansion of Gavi’s vaccine portfolio is in line with Gavi’s commitment to ensure lower-income countries have access to impactful vaccines as soon as possible. The portfolio will be further expanded in Gavi’s next strategic period, from 2026–2030, which will seek to protect more people, against more diseases, faster than ever before. The continuation of all Gavi-supported programmes after 2025 is contingent upon successful fundraising for the Alliance’s next strategic period...

Shaping the Agenda of Gavi’s New CEO - Center for Global Development

PUBLICATION

Janeen Madan Keller and Morgan Pincombe

June 10, 2024

Gavi’s new CEO, Dr. Sania Nishtar, has taken the helm at a critical time. Gavi is embarking on its new five-year strategy, known as "Gavi 6.0," and preparing to launch its next replenishment campaign.

To help shape the new CEO’s agenda, the Center for Global Development has curated a new virtual forum, inviting contributions from experts across governments, civil society organizations, global health initiatives, humanitarian organizations, industry, and academia.

This virtual forum highlights six core themes raised in our interviews with these experts and the key challenges and policy priorities that they see for Dr. Nishtar’s tenure:

1. Eligibility and transition
2. Country-driven model
3. Other global health initiatives
4. New and better partnerships
5. Vaccine manufacturing and procurement
6. Upcoming replenishment

Polio – PHEIC

Polio this week as of 12 June 2024 - GPEI

Headlines

:: Mourning the loss of Chukwuemeka Agbo, polio champion: [More.](#)

:: Latest GPEI Integration fact sheet published: the latest semi-annual fact sheet on polio integration has been published, summarizing the GPEI's efforts to use polio tools, staff, expertise and other resources to deliver important health interventions alongside polio interventions. The GPEI continues to strengthen its collaboration with a range of partners to integrate polio services with broader public health programmes

Summary of new polioviruses this week, cases and positive environmental isolates:

- :: Afghanistan: one WPV1 case
- :: Pakistan: one WPV1 case and 20 positive environmental samples
- :: Côte d'Ivoire: three cVDPV2-positive environmental samples
- :: DR Congo: one cVDPV1 case
- :: Ghana: one cVDPV2-positive environmental sample
- :: Liberia: four cVDPV2-positive environmental samples
- :: Niger: one cVDPV2-positive environmental sample
- :: Sierra Leone: six cVDPV2-positive environmental samples
- :: South Sudan: one cVDPV2 case
- :: Yemen: three cVDPV2 cases

Overview

Since its creation in 2019, the Division of Data, Analytics, and Delivery for Impact (DDI) has modernised, revolutionised, and spearheaded partnerships to transform the use of data to define priorities and drive progress at all levels of the organization. DDI leads WHO's collective efforts to accelerate information systems and digital transformation at the country level in the following ways:

- monitoring global data
- global data standards
- equitable access to global data
- country capacity assessment and interventions

These are the four cornerstones for harnessing the power of data to create a healthier world for all. In Focus 2024 will guide you through DDI's most important work and progress in each of these areas

News

[BARDA awards up to \\$500 million in Project NextGen funding for vaccine clinical trials](#)

June 13, 2024 *News Release*

Project awards made under new Rapid Response Partnership Vehicle will evaluate novel COVID-19 vaccine candidates

The Biomedical Advanced Research and Development Authority (BARDA), part of the Administration for Strategic Preparedness and Response (ASPR) within the U.S. Department of Health and Human Services (HHS), is announcing up to \$500 million in Project NextGen funding to plan and execute multiple Phase 2b clinical trials evaluating novel vaccines administered as a nasal spray or as a pill to protect against symptomatic COVID-19.

“We learned a lot during the COVID-19 pandemic that we can use to better prepare for future public health crises. That includes finding new ways to administer vaccines to make it even easier for everyone to protect themselves from illness,” said HHS Secretary Xavier Becerra. “We are making progress on the development of cutting-edge treatments, such as vaccines administered as a nasal spray or as a pill. The Biden-Harris Administration won’t stop until we have the next generation of innovative vaccines, therapeutics, and other tools to protect against COVID-19, or any other pathogen that could threaten the American public.”

FDA

Press Announcements

[FDA Roundup: June 14, 2024](#)

June 07, 2024

... On Thursday, the FDA updated its advice to manufacturers of COVID-19 vaccines (2024-2025 Formula). The FDA initially advised the manufacturers of the licensed and authorized COVID-19 vaccines that the COVID-19 vaccines (2024-2025 Formula) for use in the United States beginning in fall 2024 should be monovalent JN.1 vaccines. Based on the most current available data, along with the recent rise in cases of COVID-19 in areas of the country, the agency has further determined that the preferred JN.1-lineage for the COVID-19 vaccines (2024-2025 Formula) is the KP.2 strain, if feasible. This change is intended to ensure that the COVID-19 vaccines (2024-2025 Formula) more closely match circulating SARS-CoV-2 strains. The FDA has communicated this change to the manufacturers of the licensed and authorized COVID-19 vaccines. The agency does not anticipate that a change to KP.2 will delay the availability of the vaccines for the United States...

Journal Watch

Vaccines and Global Health: The Week in Review continues its weekly scanning of key peer-reviewed journals to identify and cite articles, commentary and editorials, books reviews and other content supporting our focus on vaccine ethics and policy. Journal Watch is not intended to be exhaustive, but indicative of themes and issues the Center is actively tracking. We selectively provide full text of some editorial and comment articles that are specifically relevant to our work. Successful access to some of the links provided may require subscription or other access arrangement unique to the publisher.

If you would like to suggest other journal titles to include in this service, please contact David Curry at: david.r.curry@centerforvaccineethicsandpolicy.org

AMA Journal of Ethics

Volume 26, Number 6: E435-505 June 2024

<https://journalofethics.ama-assn.org/issue/antimicrobial-stewardship>

Antimicrobial Resistance

Microbes include bacteria, parasites, viruses, and fungi that constantly evolve. Antimicrobial resistance (AMR) happens when microbes change, becoming harder to treat in individual human and nonhuman animals and plants with antibiotic, antiparasitic, antiviral, and antifungal agents. Resistant pathogens are easily transmissible across human and nonhuman ecology, and this theme issue attends to ethical, clinical, and policy dimensions of this set of problems. National and international burden of AMR has been assessed in terms of infection incidence, deaths, hospital length of stay, and location-specific costs of developing and applying specific pathogen-drug combinations to try to save lives and preserve food supplies. Routine and focused surveillance is key to understanding microbiological, individual, social, and ecological root causes, downstream effects, and sources of domestic and global inequity in AMR.

American Journal of Human Genetics

Jun 06, 2024 Volume 111 Issue 6 p997-1240

<https://www.cell.com/ajhg/current>

This Month in The Journal

Alyson B. Barnes, Kylee L. Spencer, Sara B. Cullinan

In recent years, polygenic risk scores (PRSs) have evolved from a statistical metric into a tool poised for introduction into clinical use. Yet, for all the promise presented by PRSs, researchers from multiple fields have highlighted several areas of concern that need to be considered before PRSs are fully integrated into standard of care. Chief among these are scientific and ethical matters related to the differential performance of PRSs across groups of humans. In this issue, Lewis et al. discuss how the eMERGE Network approached these challenges in a clinical trial that returned PRSs for ten conditions to over 25,000 US-based participants.

[Application of Genomic Medicine in Africa: 14th Conference of the African Society of Human Genetics and the 2nd International Congress of the Moroccan Society of Genomics and Human Genetics, Rabat, Morocco 2022](#)

Meryem Fakhkhari, et al.

ABSTRACT.

The 14th African Society of Human Genetics (AfSHG) Morocco Meeting and 2nd International Congress of the Moroccan Society of Genomics and Human Genetics (SM2GH), held in Rabat, Morocco, from December 12 through 17, 2022, brought together 298 attendees from 23 countries, organized by the AfSHG in collaboration with the SM2GH. The conference's overarching theme was "Applications of Genomics Medicine in Africa," covering a wide range of topics, including population genetics, genetics of infectious diseases, hereditary disorders, cancer genetics, and translational genetics. The conference aimed to address the lag in the field of genetics in Africa and highlight the potential for genetic research and personalized medicine on the continent. The goal was to improve the health of African populations and global communities while nurturing the careers of young African scientists in the field. Distinguished scientists from around the world shared their recent findings in genetics, immunogenetics, genomics, genome editing, immunotherapy, and ethics genomics. Precongress activities included a 2-day bioinformatics workshop, "NGS Analysis for Monogenic Disease in African Populations," and a Young Investigators Forum, providing opportunities for young African researchers to showcase their work. The vast genetic diversity of the African continent poses a significant challenge in investigating and characterizing public health issues at the genetic and functional levels. Training, research, and the development of expertise in genetics, immunology, genomics, and bioinformatics are vital for addressing these challenges and advancing genetics in Africa. The AfSHG is committed to leading efforts to enhance genetic research, coordinate training, and foster research collaborations on the continent.

Q-CEP (*Qualificação dos Comitês de Ética em Pesquisa que compõem o Sistema CEP/Conep*) is a nationwide project resulting from a partnership between the Brazilian National Research Ethics Commission (Conep), the Ministry of Health and Hospital Moinhos de Vento (HMV). It was developed to consolidate policy for ethical review of research with human beings in all members of the CEP/Conep System, Brazil's national system of institutional review boards. The aim of this study was therefore to report on the experience and results of the Q-CEP project.

[The European Innovation Network as a hub for medicines innovation in Europe](#)

The European Innovation Network is working to support the European medical innovation ecosystem by facilitating early dialogue between developers of medicines and regulators, as well as providing a platform for regulators to share information, good practices and expertise.

Eleonora Agricola, Caroline Auriche-Benichou, Katarzyna Zywiec

Review Article 13 May 2024

[Frameworks for transformational breakthroughs in RNA-based medicines](#)

RNA has revolutionized modern medicine, creating great expectations. However, challenges with this class of drugs persist. In this Review, John Androsavich analyses lessons learnt from RNA modalities such as antisense oligonucleotides (ASOs) and small interfering RNAs (siRNA), and discusses strategies to develop RNA drug platforms, improving their applicability, efficacy and safety profiles.

John R. Androsavich

Review Article 15 May 2024

[Combating antimicrobial resistance in malaria, HIV and tuberculosis](#)

The rise of drug resistance presents a significant challenge in the treatment of infectious diseases. This Review summarizes the status and mechanisms of drug resistance in malaria, human immunodeficiency virus (HIV) infection and tuberculosis, and explores strategies to address resistance that could be incorporated into drug development across these disease areas.

Abstract

The Expanded Programme on Immunization (EPI) and Vaccine Preventable Disease (VPD) Surveillance (VPDS) programs generate multiple data sources (e.g., routine administrative data, VPD case data, and coverage surveys). However, there are challenges with the use of these siloed data for programmatic decision-making, including...

[Overview of multimorbidity research in India: a scoping review](#)

[version 1; peer review: awaiting peer review]

Parul Puri, et al.

Abstract

Background

Due to demographic and epidemiological shifts, people are living until older ages with more morbidities. These morbidities often have shared pathophysiology, which leads to a rise in coexisting health issues known as 'multimorbidity'. Primary care studies and disease burden surveys have multiplied, unveiling varied aspects of multimorbidity, yet with inconsistent definitions and methods. This protocol aims to guide an in-depth and comprehensive exploration of multimorbidity research in India through a scoping review, to understand the extent, range, and nature of research on multimorbidity in India.

Development Financing

Elyse Painter, Emily Gustafsson-Wright

June 14, 2024

- Innovative financing methods like outcomes-based financing (OBF) aim to increase the volume, efficiency, and effectiveness of funding.
- Despite the urgent need for improved financing, there has been minimal application of OBF in the global health sector, and very few projects in the Global South.
- Opportunities to employ OBF in global health exist across multiple fields, products/technologies, and services. There are already multiple examples of successful OBF projects in health that have improved and saved lives.

Public Consultations/Call for Inputs/Call for Papers

Public Consultation on a Draft Revised Version of the Declaration of Helsinki

WMA Issued 03 June 2024

Email completed document **no later than 24 June 2024, 5pm Central Time (UTC-6)**

The workgroup's proposed edits to date are now available for public comment. To submit your organization's or your individual feedback, [download the phase 2 public comment document](#) and populate your comments in the row that corresponds to the DoH paragraph under review. If you wish to offer specific edits for consideration, indicate proposed new language with bold yellow highlighted language. Indicate any proposed deletions with a yellow highlighted strikethrough language. *Please do not use Track Changes.* Please ensure all comments are properly attributed by including your name, title and organisation. Email the completed document to doh@wma.net no later than 24 June 2024, 5pm Central Time (UTC-6). Since this is the final comment period, submissions received after June 24 will not be considered.

Consideration for Adoption: General Assembly Meeting Helsinki, Finland

The workgroup intends to recommend a final updated draft of the Declaration of Helsinki to the Medical Ethics Committee of the World Medical Association, and the document is intended to be considered by the Council and the General Assembly in Helsinki, Finland in October 2024.

National Institutes of Health (NIH) Office of Science Policy (OSP): Request for Information on Draft NIH Intramural Research Program Policy: Promoting Equity Through Access Planning

A Notice by the National Institutes of Health on 05/22/2024 **Comments Close: 07/22/2024**

SUMMARY:

The National Institutes of Health (NIH) is proposing to develop and implement a new policy within its Intramural Research Program (IRP) to promote access to products stemming from taxpayer-funded inventions. NIH seeks input on this draft policy and accompanying draft license agreement language that incorporates patient access in the commercialization process for NIH-owned inventions.

Supplemental Information

...NIH is proposing a new policy within the NIH IRP (see Appendix), to require that licensees that succeed in bringing certain products toward market submit a plan outlining steps they intend to take to promote patient access to those products. This new IRP policy makes it clear that access, defined broadly to include product affordability, availability, acceptability, and sustainability, is of paramount importance in providing a return on taxpayers' investment in biomedical research. This new policy would apply to patent licenses for the commercialization of drugs, biologics, vaccines, or devices. NIH would also employ a tiered approach, where licenses granted for late-stage inventions that are closer to market launch would include more specific, tailored access-oriented provisions, while licenses granted for early-stage inventions would be more flexible to reflect the higher uncertainty associated with technologies that lead to drugs, biologics, vaccines, or devices. Importantly, a final policy approach should be reasonable and not seek to force licensees into access obligations that obstruct commercial development or damage the viability and sustainability of a product in the market, while also balancing the need to promote access through reforms to various policies. The agency is proposing a flexible approach that allows appropriately tailored, commercially reasonable strategies to promote patient access across a range of technologies. This RFI is in relation to the licensing of government-owned inventions in accordance with 35 U.S.C. 207 and 37 CFR part 404....

[Call for Public Comment: General Principles on Plan, Design, and Analysis of Pharmacoepidemiological Studies that Utilize Real-World Data for Safety Assessment of Medicines.](#)

ICH *Varying deadlines depending on regulatory authority*

The guideline will focus on non-interventional pharmacoepidemiological studies using Real-World Data (RWD) and will include basic principles that may apply to these studies when real-world data elements are included.

Guideline Draft:

.....

CVEP is a program of the [GE2P2 Global Foundation](#) whose purpose and mission is to advance ethical and scientific rigor in research and evidence generation for governance, policy and practice in health, human rights action, humanitarian response, heritage stewardship, education and sustainable development. The Foundation serves governments, international agencies, INGOs, civil society organizations (CSOs), commercial entities, consortia and alliances.

Support for this service is provided by the [Bill & Melinda Gates Foundation](#); the [Bill & Melinda Gates Medical Research Institute](#), and industry resource members Janssen/J&J, Pfizer, Sanofi US, and Takeda, (list in formation).

Support is also provided by a growing list of individuals who use this membership service to support their roles in public health, clinical practice, government, NGOs and other international institutions, academia and research organizations, and industry.
